## Case Narrative
## Arcadis U.S., Inc.
### Lot Number: ZA29006

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.
Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved The NELAC Institute (TNI) standards, the Pace Analytical Services, LLC ("Pace") Laboratory Quality Manual, standard operating procedures (SOPs), and Pace policies. Additionally, the DoD QSM version 5.4 has been followed for these samples, and specifically Table B-24 was followed for all PFAS samples. Any exceptions to the TNI standards, the Laboratory Quality Manual, SOPs, the DoD QSM, or policies are qualified on the results page or discussed below.

All QC associated with these samples were compliant with DOD QSM 5.4 table B-24 and our PFAS SOP.
Correction factors (CF) are used to calculate the original sample concentration. The CF is the inverse of the concentration factor (sample volume / extract final volume) times the dilution factor (DF). The CF is calculated as follows:

CF = DF * FV / Vo
FV is volume of extract (mL)
Vo is initial sample volume (mL)
DF is dilution factor. For undiluted analysis, DF = 1.

Sample concentration for aqueous samples:
Concentration (ng/L) = Cs*CF,

$$C_s = \frac{\left(\frac{(A_s x C_{is})}{A_{is}}\right) - B}{M1}$$

Where

$C_s$ is on column concentration of target analyte in the sample (ng/L)
$C_{is}$ is concentration of internal standard in the sample (ng/L)
$A_s$ is peak response of target analyte in the sample
$A_{is}$ is peak response of internal standard in the sample
M1 is the average RF from ICAL or the slope from linear regression ICAL
B is the y-intercept from the ICAL

PFAS
The LCS associated with batch 96299 had multiple compounds recovered outside the acceptance limits. Samples ZA29006-003, ZA29006-004, ZA29006-005 were re-extracted and re-anlayzed outside of holding time. All data has been reported.

Sample ZA29006-006 had surrogates and LCS recovered outside of the acceptance limits. The sample was re-extracted and all data has been reported.

Surrogate recovery for the following samples was outside control limits: ZA29006-012, ZA29016-014, ZA29016-015, ZA29006-021, ZA29006-022, ZA29006-023, ZA29006-026, ZA29006-027, ZA29006-030. Re-extraction and/or re-analysis was performed outside of holding time with acceptable results. All data has been reported.

Surrogate recovery for the following samples was outside control limits: ZA29006-018, ZA29006-019, ZA29006-020, ZA29006-024, ZA29006-025, ZA29006-028, ZA29006-029. Re-extraction and/or re-analysis was performed and the data has been reported.

The method blank associated with batches 96299, 96346, 96443, 97189, 97343 had PFOS detected at a concentration that was above the MDL but below the PQL. All samples associated with this method blank that have detections for PFOS have been flagged with a "B”.

The LCS associated with batch 97189 had multiple compounds recovered above the acceptance limits. This data has been reported.

The LCS associated with batches 96772, 97077 had 8:2 FTS recovered above the acceptance limits. This demonstrates a high bias on analytical results. There were no detections for this compound in the samples associated with this batch; therefore, data quality is not impacted.

The MS/MSD associated with samples ZA29006-021, ZA29006-022, ZA29006-028 had compounds recovered outside of the acceptance limits. The LCS was recovered within the required acceptance limits; therefore, this demonstrates a matrix effect and data quality is not impacted.

# Manual Integration Summary

## Arcadis U.S., Inc.

Lot Number: ZA29006

Project Name: ESTCP Vertebrae

Project Number:

Where applicable, analytes for which manual integration occurred have been flagged with the following:

| Qualifier | Technical Justification | Qualifier | Technical Justification | Qualifier | Technical Justification |
|---|---|---|---|---|---|
| M-01 | Split peak | M-07 | Low fit | M-13 | Error |
| M-02 | Peak tailing | M-08 | Peak not found | M-14 | Baseline |
| M-03 | Incorrect auto integration | M-09 | Analyte not Identified by the Data System | M-15 | Other |
| M-04 | Poor chromatography | M-10 | Analyte misidentified by the Data System | M-16 | Retention time shift |
| M-05 | Manually assigned peak | M-11 | Invalid integration | M-17 | Shouldering |
| M-06 | Wrong isomer | M-12 | Wrong peak | | |

LOQ = Limit of Quantitation
U = Not detected at or above the LOD
H = Out of holding time
B = Detected in the method blank
N = Recovery is out of criteria
W = Reported on wet weight basis
E = Quantitation of compound exceeded the calibration range
P = The RPD between two GC columns exceeds 40%
LOD = Limit of Detection
DL = Detection Limit
J = Estimated result < LOQ and ≥ DL
Q = Surrogate failure
L = LCS/LCSD failure
S = MS/MSD failure

LOQ = Limit of Quantitation
U = Not detected at or above the LOD
H = Out of holding time
B = Detected in the method blank
N = Recovery is out of criteria
W = Reported on wet weight basis
E = Quantitation of compound exceeded the calibration range
P = The RPD between two GC columns exceeds 40%
LOD = Limit of Detection
DL = Detection Limit
J = Estimated result < LOQ and ≥ DL
Q = Surrogate failure
L = LCS/LCSD failure
S = MS/MSD failure

## Case Narrative
## Arcadis U.S., Inc.
### Lot Number: ZD05031

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.
Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved The NELAC Institute (TNI) standards, the Pace Analytical Services, LLC ("Pace") Laboratory Quality Manual, standard operating procedures (SOPs), and Pace policies. Additionally, the DoD QSM version 5.4 has been followed for these samples, and specifically Table B-24 was followed for all PFAS samples. Any exceptions to the TNI standards, the Laboratory Quality Manual, SOPs, the DoD QSM, or policies are qualified on the results page or discussed below.

All QC associated with these samples were compliant with DOD QSM 5.4 table B-24 and our PFAS SOP. Correction factors (CF) are used to calculate the original sample concentration. The CF is the inverse of the concentration factor (sample volume / extract final volume) times the dilution factor (DF). The CF is calculated as follows:

CF = DF * FV / Vo
FV is volume of extract (mL)
Vo is initial sample volume (mL)
DF is dilution factor. For undiluted analysis, DF = 1.

Sample concentration for aqueous samples:
Concentration (ng/L) = Cs*CF,

$$C_s = \frac{\left(\frac{(A_s x C_{is})}{A_{is}}\right) - B}{M1}$$

Where

$C_s$ is on column concentration of target analyte in the sample (ng/L)
$C_{is}$ is concentration of internal standard in the sample (ng/L)
$A_s$ is peak response of target analyte in the sample
$A_{is}$ is peak response of internal standard in the sample
M1 is the average RF from ICAL or the slope from linear regression ICAL
B is the y-intercept from the ICAL

PFAS
Reextraction of the following samples was performed outside of the holding time: ZD05031-002, ZD05031-003, ZD05031-027, ZD05031-030. Samples were re-extracted for a dilution and all data has been reported.

Surrogate recovery for the following samples was outside control limits: ZD05031-006, ZD05031-007, ZD05031-008. Re-extraction and/or re-analysis was performed outside of holding time with acceptable results and all data has been reported.

The LCS associated with batch 10637 had PFOS recovered above the acceptance limits. Samples ZD05031-009, ZD05031-010, ZD05031-011, ZD05031-012, ZD05031-013, ZD05031-014, ZD05031-015, ZD05031-016, ZD05031-017 were re-extracted and re-analyzed outside of holding time. All data has been reported.

The MS/MSD associated with samples ZD05031-003, ZD05031-027, ZD05031-030 had compounds recovered outside of the acceptance limits. The LCS was recovered within the required acceptance limits; therefore, this demonstrates a matrix effect and data quality is not impacted.

The method blank associated with batches 10632, 10637, 11501 had PFOS detected at a concentration that was above the MDL but below the PQL. All samples associated with this method blank that have detections for PFOS have been flagged with a "B”.

The method blank associated with batch 11072 had PFHxS, PFOS detected at a concentration that was above the MDL but below the PQL. All samples associated with this method blank that have detections for PFHxS, PFOS have been flagged with a "B”.

Where applicable, analytes for which manual integration occurred have been flagged with the following:

| Qualifier | Technical Justification | Qualifier | Technical Justification | Qualifier | Technical Justification |
|---|---|---|---|---|---|
| M-01 | Split peak | M-07 | Low fit | M-13 | Error |
| M-02 | Peak tailing | M-08 | Peak not found | M-14 | Baseline |
| M-03 | Incorrect auto integration | M-09 | Analyte not Identified by the Data System | M-15 | Other |
| M-04 | Poor chromatography | M-10 | Analyte misidentified by the Data System | M-16 | Retention time shift |
| M-05 | Manually assigned peak | M-11 | Invalid integration | M-17 | Shouldering |

Where applicable, analytes for which manual integration occurred have been flagged with the following:

| Qualifier | Technical Justification | Qualifier | Technical Justification | Qualifier | Technical Justification |
|---|---|---|---|---|---|
| M-01 | Split peak | M-07 | Low fit | M-13 | Error |
| M-02 | Peak tailing | M-08 | Peak not found | M-14 | Baseline |
| M-03 | Incorrect auto integration | M-09 | Analyte not Identified by the Data System | M-15 | Other |
| M-04 | Poor chromatography | M-10 | Analyte misidentified by the Data System | M-16 | Retention time shift |
| M-05 | Manually assigned peak | M-11 | Invalid integration | M-17 | Shouldering |
| M-06 | Wrong isomer | M-12 | Wrong peak | | |

U = Not detected at or above the LOD
H = Out of holding time
B = Detected in the method blank
N = Recovery is out of criteria
W = Reported on wet weight basis
E = Quantitation of compound exceeded the calibration range
P = The RPD between two GC columns exceeds 40%
LOD = Limit of Detection
DL = Detection Limit
J = Estimated result < LOQ and ≥ DL
Q = Surrogate failure
L = LCS/LCSD failure
S = MS/MSD failure

**Sample Preservation** (Must be completed for any sample(s) incorrectly preserved or with headspace.)

Sample(s) NA were received incorrectly preserved and were adjusted accordingly in sample receiving with NA mL of circle one: $H_2SO_4$, $HNO_3$, HCl, NaOH using SR # NA. ☐
Time of preservation NA. If more than one preservative is needed, please note in the comments below.

Sample(s) NA were received with bubbles >6 mm in diameter.

Samples(s) NA were received with TRC > 0.5 mg/L (If #19 is *no*) and were adjusted accordingly in sample receiving with sodium thiosulfate ($Na_2S_2O_3$) with Unique ID: NA.

## Case Narrative
## Arcadis U.S., Inc.
### Lot Number: ZG19017

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.
Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved The NELAC Institute (TNI) standards, the Pace Analytical Services, LLC ("Pace") Laboratory Quality Manual, standard operating procedures (SOPs), and Pace policies. Additionally, the DoD QSM version 5.4 has been followed for these samples, and specifically Table B-24 was followed for all PFAS samples. Any exceptions to the TNI standards, the Laboratory Quality Manual, SOPs, the DoD QSM, or policies are qualified on the results page or discussed below.

All QC associated with these samples were compliant with DOD QSM 5.4 table B-24 and our PFAS SOP. Correction factors (CF) are used to calculate the original sample concentration. The CF is the inverse of the concentration factor (sample volume / extract final volume) times the dilution factor (DF). The CF is calculated as follows:

CF = DF * FV / Vo
FV is volume of extract (mL)
Vo is initial sample volume (mL)
DF is dilution factor. For undiluted analysis, DF = 1.

Sample concentration for aqueous samples:
Concentration (ng/L) = Cs*CF,

$$C_s = \frac{\left(\frac{(A_s x C_{is})}{A_{is}}\right) - B}{M1}$$

Where

$C_s$ is on column concentration of target analyte in the sample (ng/L)
$C_{is}$ is concentration of internal standard in the sample (ng/L)
$A_s$ is peak response of target analyte in the sample
$A_{is}$ is peak response of internal standard in the sample
M1 is the average RF from ICAL or the slope from linear regression ICAL
B is the y-intercept from the ICAL

Pace is a DoD/DOE accredited laboratory; however, the following analyses are currently not listed on our DoD/DOE scope of accreditation: Drinking Water: pH EPA 150.1, Turbidity EPA 180.1, Metals EPA 200.7 & 200.8, Mercury EPA 245.1, Anions EPA 300.0, Cyanide EPA 335.4, Nitrates EPA 353.2, Orthophosphate & Phosphorus EPA 365.1, EDB/DBCP EPA 504.1, HPC SIMPLATE, Color SM 2120 B-2011, Alkalinity SM 2320 B-2011, Specific Conductance SM 2510 B-2011, Residue-filterable (TDS) SM 2540 C, Calcium Hardness (CaCO2) SM 3500-Ca B-2011, TRC SM 4500 Cl G-2011, pH SM 4500 H=B-2011, E.Coli, Total Coliform. Non-Potable Water: Metals EPA 200.7, Strontium EPA 200.8, Chlorate EPA 300.0, Cyanide EPA 335.4, Phenolics EPA 420.4, 2-Methyl-4,6-Dinitrophenol EPA 625.1, Propane RSK-

Manual integration summaries are provided at the end of this report when applicable.

PFAS
Re-extraction of the following samples was performed outside of the holding time: ZG19017-015, ZG19017-016, ZG19017-020, ZG19017-022, ZG19017-023, ZG19017-024, ZG19017-025, ZG19017-027, ZG19017-028 due to PFOS being detected over calibration. All data has been reported.

Surrogate recovery for the following samples was outside control limits: ZG19017-003, ZG19017-004, ZG19017-030. Re-extraction and/or re-analysis was performed outside of holding and all data has been reported.

The method blank associated with batches 15908, 16118, 16172 had PFOS detected at a concentration that was above the MDL but below ½ the PQL. All samples associated with this method blank that have detections for PFOS have been flagged with a "B".

The method blank associated with batch 16001 had 6:2FTS, PFOS detected at a concentration that was above the MDL but below ½ the PQL. All samples associated with this method blank that have detections for 6:2FTS, PFOS have been flagged with a "B".

The LCS associated with batch 16001 had 3:3FTCA recovered above the acceptance limits. This demonstrates a high bias on analytical results. There were no detections for this compound in the samples associated with this batch; therefore, data quality is not impacted.

The LCS associated with batch 16518 had NEtFOSAA recovered above the acceptance limits. This demonstrates a high bias on analytical results. There were no detections for this compound in the samples associated with this batch; therefore, data quality is not impacted.

The LCS associated with batch 16603 had PFNA recovered below the acceptance limits. This demonstrates a low bias on analytical results. Results for this compound in the samples associated with this batch should be considered estimated.

The MS/MSD associated with sample ZG19017-018 had compounds recovered outside of the acceptance limits. The LCS was recovered within the required acceptance limits; therefore, this demonstrates a matrix effect and data quality is not impacted.

LOQ = Limit of Quantitation
U = Not detected at or above the LOD
H = Out of holding time
B = Detected in the method blank
N = Recovery is out of criteria
W = Reported on wet weight basis
E = Quantitation of compound exceeded the calibration range
P = The RPD between two GC columns exceeds 40%
LOD = Limit of Detection
DL = Detection Limit
J = Estimated result < LOQ and ≥ DL
Q = Surrogate failure
L = LCS/LCSD failure

LOQ = Limit of Quantitation
B = Detected in the method blank
E = Quantitation of compound exceeded the calibration range
DL = Detection Limit
Q = Surrogate failure
U = Not detected at or above the LOD
N = Recovery is out of criteria
P = The RPD between two GC columns exceeds 40%
J = Estimated result < LOQ and ≥ DL
L = LCS/LCSD failure
H = Out of holding time
W = Reported on wet weight basis
LOD = Limit of Detection
S = MS/MSD failure
