

BRINGING INDUSTRIAL REUSE TO SUPERFUND SITES

From cleanup to final settlement or leasing agreements, EPA plays a central role in facilitating the cleanup and redevelopment of contaminated sites by bringing together key parties. EPA works with stakeholders to negotiate settlement agreements, resolve competing liens and ensure future reuse is compatible with the cleanup. Collaborative work on the Buckbee-Mears site in Cortland, New York, and the Tex Tin Superfund site in Texas City, Texas, positioned sites for successful industrial reuse outcomes, advancing economic development opportunities throughout the community.

PRESENTERS:

Melissa Friedland, EPA Superfund Redevelopment Initiative
