3

Polling Question

Have you used the RE-Powering Mapper before?

- Yes
- No
- Unsure

4

4

1 | Data

5

What Data Was Used and Why?

RE-Powering worked with states, EPA offices and other federal agencies to determine the best possible information to provide to end users. This included:

- Using EPA datasets
- Identifying and engaging states
- Engaging National Renewable Energy Lab (NREL) experts
- Adding resource and infrastructure data

6

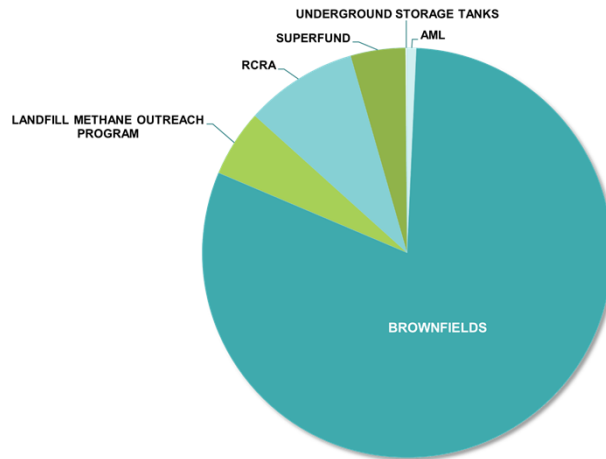

6

EPA Tracked Sites

EPA-tracked sites consist of:

- Brownfields
- RCRA
- Landfill Methane Outreach Program
- Superfund
- Abandoned Mine Lands
- Underground Storage Tanks (pilot)

7

7

State Data

Including data from states allows:

- Different site types from what EPA might track, including the addition of coal mines.
- More specific details about sites.
- More coverage and exposure of sites to interested parties.

Data from the following states was included: California, Colorado, Connecticut, Florida, Hawaii, Illinois, Iowa, Maine, Maryland, Massachusetts, Minnesota, Missouri, New Jersey, New York, North Carolina, Oregon, Pennsylvania, Rhode Island, Texas, Virginia, West Virginia and Wisconsin.

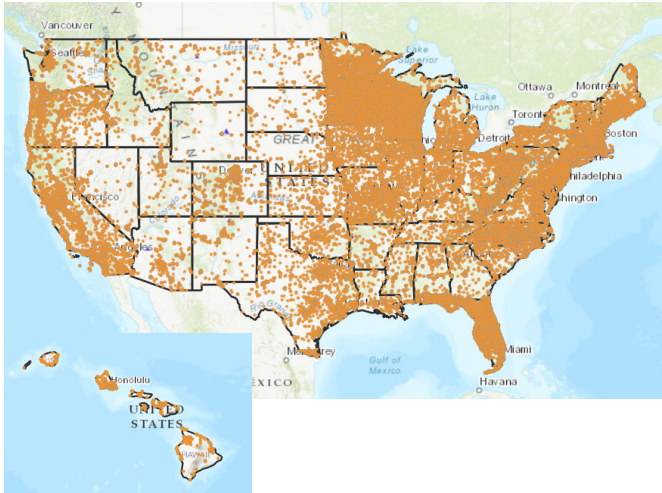

8

8

How Many Sites?

- Over 190,000 sites total
- Over 147,000 state provided sites
- Over 37,000 EPA-tracked sites

9

9

Have Data?

If you have data you would like to see in the RE-Powering Mapper, let us know!

Email:

strine.lora@epa.gov

Regional Team Contacts:

<https://www.epa.gov/re-powering/forms/contact-us-about-re-powering-americas-land>

Data needs to have locational information at a minimum.

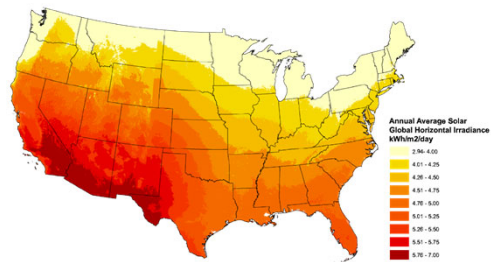

10

10

Resource Data

- NREL assisted in identifying the best renewable energy resource data for wind, solar and biomass.
- Southern Methodist University provided datasets for geothermal resources.

11

11

Infrastructure

- **Distance to infrastructure is important when considering siting renewable energy.**
 - Transmission lines are expensive to build.
 - Substations are important for interconnection.
 - Rails are useful for transporting biomass feedstock and biofuels.
 - Roads are needed to bring solar panels or wind turbines to the site location.

12

12

2

Screening Criteria

Screening Criteria

- **Renewable energy types**
 - Solar
 - Wind
 - Biomass
 - Geothermal
- **Screening Considerations**
 - Resource
 - Acreage
 - Transmission Lines
 - Roads
 - Rails

RENEWABLE ENERGY TYPE AND SCALE	ESTIMATED RENEWABLE ENERGY PROJECT CAPACITY RANGE*	RENEWABLE ENERGY RESOURCE AVAILABILITY	ACREAGE (ACRES)	DISTANCE TO TRANSMISSION** (MILES)	DISTANCE TO GRADED ROADS (MILES)
Solar Photovoltaic (PV)		Global Horizontal Irradiance (kWh/m²/day)			
Utility scale PV	≥ 5 MW	N/A	≥ 35	≤ 10	≤ 10
Distributed scale PV	< 5 MW	N/A	< 35	N/A	N/A
Off-grid PV***	N/A	N/A	N/A	N/A	N/A
Unknown acreage PV****	N/A	N/A	N/A	N/A	N/A
Wind		Wind speed (m/s)*****			
Utility scale wind	≥ 15 MW	5.5 m/s at 80 m	≥ 1,200	≤ 5	≤ 10
Community scale wind	1.5 MW - 15 MW	5.5 m/s at 80 m	40 - 1,200	N/A	≤ 1
Facility scale wind	< 1.5 MW	5.0 m/s at 40 m	0.5 - 40	N/A	N/A
Unknown acreage wind****	N/A	5.5 m/s at 80 m	N/A	N/A	N/A
Biomass		Biomass potential within 50 miles (metric tons/year)			
Biopower	> 10 MW	≥ 150,000 (woody)	≥ 6	≤ 10	≤ 3 road; ≤ 8 rail
Biorefinery	> 20 MMgal/year	≥ 286,000 (herbaceous)	≥ 132	N/A	≤ 3 road; ≤ 8 rail
Geothermal		Permafrost Presence			
Heat pump	N/A	Absence of glacier or continuous permafrost	Acreage and distance variables are not included in the prescreening.		

* MW is megawatts, MMgal/year is million gallons per year.
 ** Transmission lines are typically defined as power lines with voltages greater than or equal to 69 kilovolts (KV).
 *** Off-grid would not be connected to the grid for the purposes of this screening criteria. Off-grid does not include no-acreage sites.
 **** Acreage information is not readily available for these sites; this is the only category in which sites without acreage information are included.
 ***** Wind speed is represented in meters per second (m/s) at heights of 40 and 80 m, as specified for each resource type.
 N/A is not applicable.

3

Pulling it all Together

15

Real Results

- **190,000** plus sites screened for renewable energy potential.
- Over **158,000** sites screened positively for renewable energy potential in states that have a Renewable Portfolio Standard (RPS) or goal.
- Approximately **71,000** sites screened positively for renewable energy potential in states that have a RE-Powering policy that encourages renewable energy on contaminated lands.
- Nearly **34,000** sites screened positively for distributed-scale photovoltaic (PV) solar or larger in states that encourage community solar or other shared renewables.
- More than **82,000** screen positively for off-grid solar that could be used on-site to reduce energy use or power green remediation.

16

16

Pulling it all Together – End Products

RE-Powering Mapper:

An interactive web application, allows users to identify contaminated lands, landfills and mine sites for renewable energy development.

RE-Powering Geodatabase:

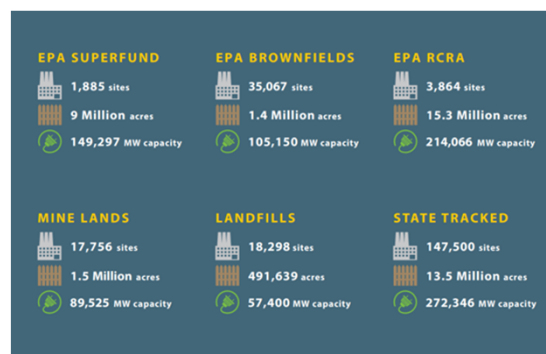

ESRI geodatabase containing screened sites from the RE-Powering Mapper

RE-Powering Spreadsheet:

Microsoft Spreadsheet containing screened sites from the RE-Powering Mapper

Documentation

- **Combined User Guide and Data Documentation**
 - Has step-by-step user information
 - Details regarding data included
- **RE-Powering Mapper Factsheet**
 - Contains facts and statistics about the Mapper

4

Mapper Upgrades

19

Mapper Upgrades

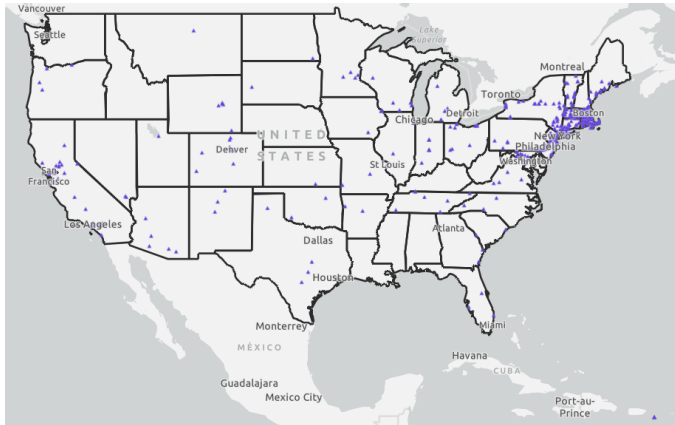

- **Latest Esri platform**
- **Increased number of included state tracked sites**
- **Refreshed screening criteria based on current market**
- **Added more tools:**
 - Custom filters
 - Additional layers
 - Links to environmental justice information

Completed Projects Across the US

Polling Question

Do you plan on using the RE-Powering Mapper 3.0 in the future?

- Yes
- No
- Unsure

Thank You!

RE-Powering would like to thank the following groups for providing data and insight into the RE-Powering Mapper:

- EPA
- ORISE Research Fellows
- National Renewable Energy Lab
- State Agencies
- Beta Testers
- GDIT
- North Point Geographic Solutions

Without you RE-Powering Mapper 3.0 would not be nearly as awesome as it is!

23

23

Thank You to Our Colleagues!

- RE-Powering Response Team
- Landfill Methane Outreach Program
- Office of Land and Emergency Management
- Office of Communications, Partnerships and Analysis
- Office of Brownfields and Land Revitalization
- Office of Superfund Remediation and Technology Innovation
- Office of Resource Conservation and Recovery
- Office of Underground Storage Tanks
- Office of Mountains, Deserts and Plains
- ORISE Research Fellows
- National Renewable Energy Lab
- California Department of Toxic Substances Control
- Colorado Department of Public Health and Environment
- Connecticut Department of Energy and Environmental Protection
- Florida Department of Environmental Protection
- Hawai'i State Department of Health Hazard Evaluation and Emergency Response Office
- Illinois Environmental Protection Agency
- Iowa Natural Resources Department
- Maine Department of Environmental Protection
- Maryland Land Restoration Program
- Massachusetts Clean Energy Results Program
- Missouri Land Reclamation Program
- New Jersey Department of Environmental Protection
- New York Department of Environmental Conservation
- North Carolina Department of Environmental Quality
- Oregon Department of Environmental Quality
- Pennsylvania Bureau of Abandoned Mine Reclamation
- Rhode Island Department of Environmental Management
- Texas Commission on Environmental Quality
- Virginia Department of Energy
- West Virginia Office of Abandoned Mine Lands and Reclamation
- Wisconsin Department of Natural Resources
- Beta Testers
